Nesting Programme for Green Living and Empathy Development

Dear Students,

Presidency University is excited to announce a nesting programme scheduled for May 2nd, 2023 at 3:00 pm, aimed at generating awareness about green living and empathy development among our community members, within the Presidency Campus.

The nesting program will focus on the following objectives:

**Creating Awareness about Green Living:** Through the nesting programme, we aim to educate participants about the importance of sustainable living practices, including waste management and environmental conservation.

**Empathy Development:** Participants will engage in artificial nest making and monitoring activities to cultivate empathy towards other organisms, particularly birds. Artificial nests provide essential habitat for common bird species, especially in urban areas, and contribute to the conservation of biodiversity.

By participating in this nesting programme, we can collectively contribute to creating a more sustainable and empathetic environment for ourselves and future generations. We encourage all members of our community to join us in this meaningful initiative and make a positive impact on our campus and beyond.

For further information or inquiries, please contact NSS Cell.

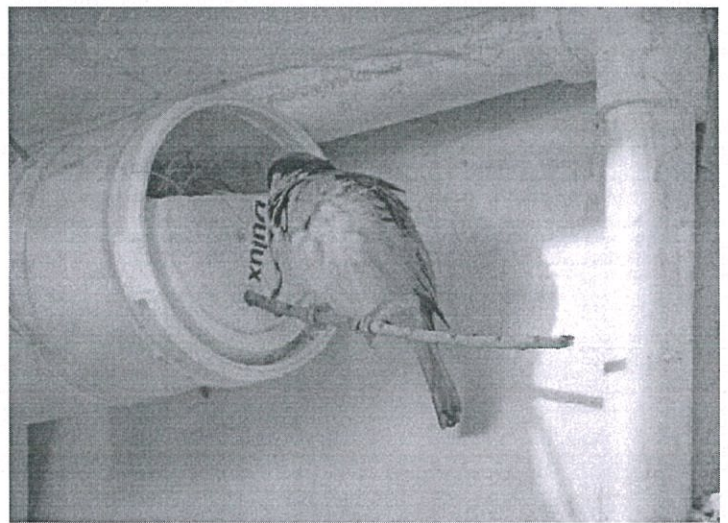

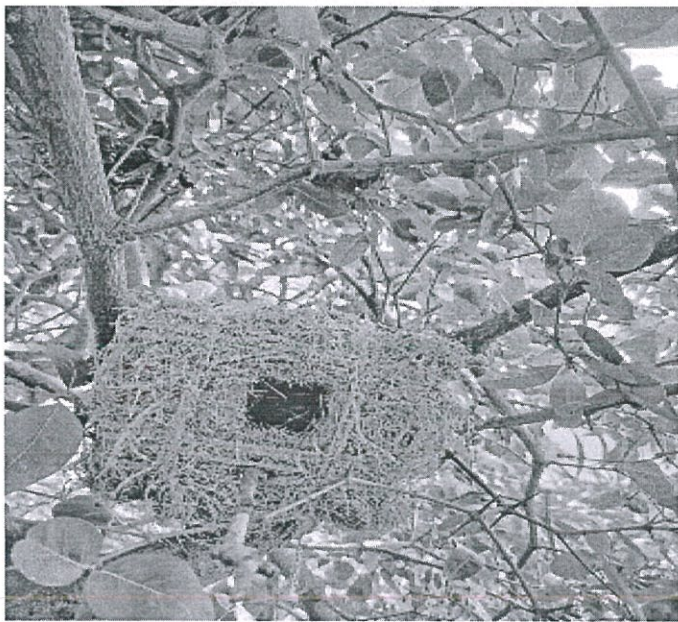

Warm regards,  
Prof. Sumita Saha  
Coordinator of NSS Cell,

## 5. Empathy development

Presidency University organised a nesting programme with organic wastes to generate awareness about both green living and empathy development. The artificial nest making and monitoring was created to teach empathy towards other organisms. Artificial nests are helpful for common bird species, especially in urban areas. As a lasting solution to the dwindling number of birds in urban spaces. Hence efforts are being made to prepare artificial nest and put them up in various parts of the university.
